Environmental Product Declaration

In accordance with ISO 14025 and EN 15804:2012+A2:2019 for

Floor Tile

manufactured by Hitit Seramik

Programme:
The International EPD® System
www.environdec.com

Local Operator:
EPD Turkey

Publication Date:
2022-12-07

Programme Operator:
EPD International AB

S-P Code:
S-P-06763

Validity Date:
2027-12-06

An EPD should provide current information and may be updated if conditions change. The stated validity is therefore subject to the continued registration and publication at www.environdec.com

The EPD owner has the sole ownership, liability, and responsibility for the EPD. EPDs within the same product category but from different programmes may not be comparable. EPDs of construction products may not be comparable if they do not comply with EN 15804.

Procedure for follow-up of data during EPD validity involves third party verifier:

Yes ◯ No ☑

About Hitit Seramik

Established on October 17, 1989 for the production of Ceramic Floor and Wall Tiles, Hitit Seramik Sanayi ve Ticaret A.Ş. started its activities on February 22, 1991 with a total capacity of 2 million m^2 including 1,000,000 m^2 Wall Tiles and 1,000,000 m^2 Floor Tiles in the first stage on 500,000 m^2 land located in Uşak Organized Industrial Zone. Hitit Seramik entered into a rapid growth process as a result of the new investment activities that were accelerated following the installation and production and the production capacity of 10 million m^2 was achieved in 76,000 m^2 closed factories complex within a short period of time.

Capacity and product type increase was required and so, a decision on new investments made in 2004 and works were started rapidly in the face of domestic and international markets' trust and intense demands of Hitit Seramik products, brand, and quality in the 2000s. 40,000 m^2 additional closed factory buildings were built and completed with the company's own resources in a short period of time and 20 million m^2 capacity was achieved by reaching to an additional production capacity of 10 million m^2.

The history of ***Hitit Seramik***

that always aims to produce and present

the ***cutting edge and bettermost***

...

It was aimed to present new and pioneering products that can be produced with special technologies and machines to Turkey and world markets by conducting extensive researches in investment studies and this has been achieved. Hitit Seramik has become one of the rare production facilities of the world that can produce the most sizes and types of coating materials in a production facility today with the power of its new investments.

These targets of Hitit Seramik, which always aims to produce the cutting edge and the bettermost, were achieved by identifying the needs of the user accurately, capturing innovative and creative approaches to respond to these constantly changing needs, creating a competitive structure within itself, conducting rigorous and forward-looking research in all investments, selecting the right technology and machinery, allocating large financial resources, and exhausting, but tasteful studies.

About Floor Tile

Product Description

It is a low-density, coarser, granular and porous inorganic material with a different recipe compared to porcelain tiles obtained by heating and hardening ceramic clay soil. It is popularly known as terracotta. Due to the high amount of porosity (pore ratio) in the ceramic tiles, they absorb water into their body and therefore do not have frost resistance. The cooking temperature is between 1150-1250. Ceramic tile should only be used indoors. They are materials with low strength and no thermal shock resistance. They distinguish between wall and floor tiles according to the firing temperature and the glaze feature.

UN CPC code for Floor Tiles is 37310.

Product Area of Application

It can be used for covering all indoor floors. Since it has a high water absorption capacity, it is not suitable for outdoor use where temperature differences occur.

Raw Material	Composition, %
Clay	40-50
Calcite	0-10
Feldspar	30-40
Others	0-5

Packaging Material	Weight, %/m²
Cardboard	7
Wood	89
Plastic	3
Glue	<1
Label	<1

LCA Information

> Goal and Scope

Evaluation of environmental impacts for 1 m^2 average tiles from cradle to grave.

> System Boundary

The system boundary of the Hitit Seramik Tiles are craddle to grave with module D.

	Product Stage			Constrcution Process Stage		Use Stage							End of Life Stage				Benefits and Loads

*Description of the system boundary (X = Included in LCA, NR: Not Relevant)**

> Database and LCA Software

Ecoinvent 3.8 and SimPro 9.3 is used for the calculation.

> Data Quality

Raw materials, energy and water consumption, waste generation, material and product transport data are primary data collected from Hitit Seramik.

> Period Under Review

All primary data collected from Yurtbay is for the period year of 2021.

> Declared Unit

1 m^2 average tile with an average weight of 17 kg.

> Geographical Scope

The geographical scope of this EPD is Türkiye.

**Note: The LCA was modelled for specific product at plant so there is no variation.*
**Note: All primary data is taken from Hitit Seramik and Ecoinvent was used for secondary data.*

System Boundary

A1-A3

Raw Material Supply, Transport & Manufacturing

A1 represents raw material supply which includes raw material extraction and pre-treatment processes before production. A2 relevant to raw material transportation to the plant and A3 refers to the impact occurs from manufacturing process.

A4

Product Transport

This stage is relevant to the transportation of the final product from the factory gate to the customers.

A5

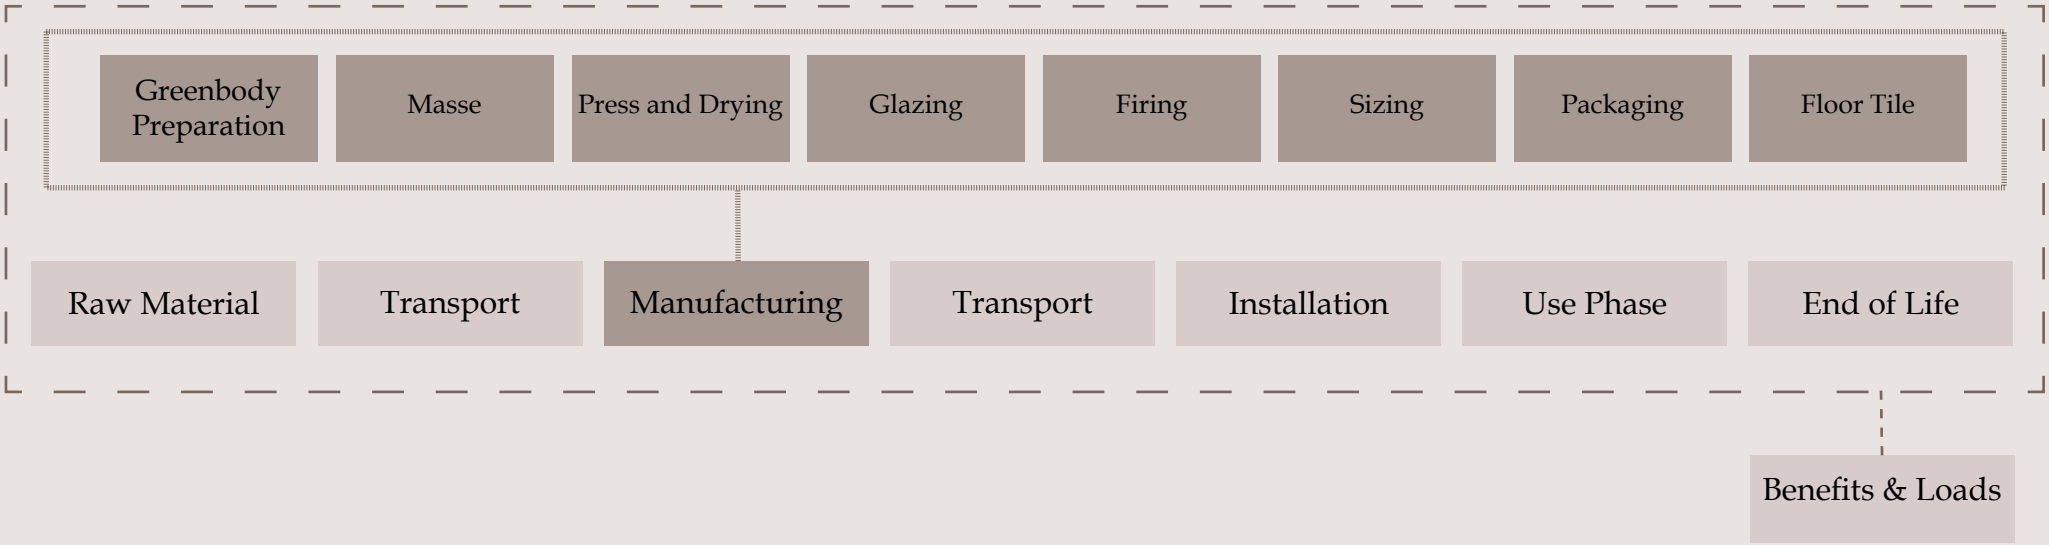
Installation

This stage includes the adhesive mortar and water usage in the construction site. For 1 m^2 tile installation; 6 kg mortar and 1.5L water usage was adviced by Hitit Seramik.

B1

Use

Tiles do not cause any emissions in the use stage because of their inert feature.



System Boundary

B2

Maintenance

Hitit Seramik advices to use 0.2 mL detergent and rinse with 0.1 L tap water after cleaning. The results are given for a one-time cleaning activity, as the activity will vary by user.

B3-B5

Repair, Replacement, Refurbishment

Tiles do not require any repairment during the use phase and therefore no impacts should be declared.

B6-7

Operational Energy Use and Operational Water Use

Tiles do not require any water and energy in the use phase and therefore no impacts ocurred in this module.

C1

Deconstruction/Demolition

Deconstruction of tiles at the end of their life is done manually. So no impact occurs in this module.

C2

Waste Transport

Waste transport includes diiscarded tiles and mortar to disposal area. Distance from demolition site to inert landfill site for final disposal is assumed as 50 km.

C3

Waste Processing

Environmental impacts generated during the crushing of discarded tiles before recycle or reuse are very low. Therefore, impacts are neglected.

C4

Disposal

Tiles end up at construction and demolition waste landfills at their end of life and modelled as such in this LCA.

D

Benefits & Loads

Inert filler benefits and recycling of packaging materials specified in the disposal stage.

LCA Results

Indicator	Unit	A1-A3	A4	A5	B1	B2	B3-B7	C1	C2	C3	C4	D
GWP-GHG	kg CO_2 eq	9.40	0.868	7.74	0	1.08	0	0	0.192	0	0.315	-0.637

B5: Refurbishment. B6:Operational Energy Use. B7: Operational Water Use C1: De-Construction. C2: Waste Transport. C3: Waste Processing. C4: Disposal. D: Benefits and Loads Beyond the System Boundary.											
Disclaimer 1	This impact category deals mainly with the eventual impact of low dose ionizing radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents. occupational exposure nor due to radioactive waste disposal in underground facilities. Potential ionizing radiation from the soil. from radon and from some construction materials is also not measured by this indicator.											
Disclaimer 2	The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experienced with the indicator.											
Disclaimer 3*	EP-freshwater: This indicator has been calculated as "kg P eq"as required in the characterization model. (EUTREND model. Struijs et al. 2009b. as implemented in ReCiPe; http://eplca.jrc.ec.europa.eu/LCDN/developerEF.xhtml)
